

REMARKS

INTRODUCTION

In accordance with the foregoing, claim 10 has been added. Claims 1-3, 5-7 and 10 are pending and under consideration.

CLAIM REJECTIONS

All claims were rejected under 35 USC 102(e) as being anticipated by Ando et al. (US 6,782,189) (hereinafter "Ando").

In the Advisory Action mailed on March 8, 2007, the Examiner noted that Ando teaches a table that includes the PID of a packet having a PMT which includes the PIDs of TS packets having audio and/or video information related to the TV program and cited 35:6-35:31 and figures 9, 20 and 23 of Ando.

However, it is respectfully submitted that Ando depicts STREAM.IFO (navigation data) 105 and STREAM.VRO (stream data) 106 in Figure 2. The stream data (STREAM.VRO) 106 is data transmitted in the form of a packet structure and the STREAM.IFO (navigation data) 105 is a file where management information of the stream data is recorded. Please see 8:29-8:37 of Ando. The stream data (STREAM.VRO) 106 and the navigation data (STREAM.IFO) 105 are recorded on an information storage medium as shown in Figure 3(e) of Ando.

As seen in Figures 1(a) and 1(h) of Ando, the stream data (STREAM.VRO) 106 includes a transport packet header 61. The transport header 61 in Figure 1(h) is depicted as a transport packet header 511 in Figure 23(b). See Ando, 7:28-7:32. therefore, in Ando, the packet i.d. (PID) 502 is included in the transport packet header 511 of the stream data 106.

The STREAM.VRO 106 corresponds to the program data of the present invention, whereas the STREAM.IFO 105 corresponds to the program table of the present invention. Accordingly, Ando does not teach the feature of the present invention that the xtreacted information in Claim 1 and the program table in Claim 5 include the PAT, the PMT, and the location information of an I-Picture.

For the foregoing reasons, it is respectfully submitted that the claims of the present application patentably distinguish over Ando.

Withdrawal of the foregoing rejection is requested.

NEW CLAIM

Claim 10 has been added to present an additional feature of the present invention. Support for this amendment may be found in at least paragraph [0018] of the present application. It is respectfully submitted that at least the feature of claim 10 where the storing apparatus is a hard disc drive is not discussed in the cited prior art. In particular, In the Ando et al. (US 6,782,189) reference, the information storage medium 201 disclosed is a recordable/reproducible optical disc such as a DVD-RAM disc that by definition would have less storage capacity than a hard disc drive as recited in claim 10.

CONCLUSION

There being no further outstanding objections or rejections, it is submitted that the application is in condition for allowance. An early action to that effect is courteously solicited.

Finally, if there are any formal matters remaining after this response, the Examiner is requested to telephone the undersigned to attend to these matters.

If there are any additional fees associated with filing of this Amendment, please charge the same to our Deposit Account No. 19-3935.

Respectfully submitted,

STAAS & HALSEY LLP
